**Project Description:** *The company name has been anonymised as GlowCo to protect client confidentiality.*

GlowCo is a direct-to-consumer health, wellness and beauty brand operating across four markets — Canada, USA, UK and Australia. Over three years (2023–2025) the business scaled aggressively, expanding its product catalogue across five categories and running paid media campaigns across seven digital channels simultaneously.

The challenge was clear: revenue was growing but profitability was under pressure. Ad spend was increasing year over year yet the return on that spend was telling a different story depending on where you looked. Someone needed to connect the dots between the marketing dollars going out and the profitable customers coming in.

That someone was me.

## The Data Story

### Act 1 — Setting & Hook

GlowCo launched in 2023 with genuine momentum. Revenue climbed, customers discovered the brand and the team poured money into every digital channel they could find. Life was good. The numbers were going up. Everyone was happy.

But as any data analyst worth their salt knows — when everyone is happy and nobody is asking hard questions, that is precisely the moment to start asking hard questions.

### Act 2 — Rising Action

Dig a little deeper and the cracks begin to show. Ad spend is growing faster than revenue. ROAS is quietly declining on the channels receiving the most budget. Meta Facebook and Meta Instagram are delivering diminishing returns while TikTok Ads is quietly outperforming everyone at a fraction of the cost.

Meanwhile a small but mighty cohort of High-LTV customers is generating a disproportionate share of revenue — acquired predominantly through Google Search and Email Marketing. Two channels that are chronically underfunded relative to their contribution.

### Act 3 — The Aha Moment

The Supplements category — not Skincare, not the glamorous hero products plastered across Instagram — is quietly delivering the highest gross profit margins in the entire catalogue at 68.2%. TikTok ROAS improved 31% from 2023 to 2025. Meta ROAS declined 22%. Email Marketing has the lowest CPA of any channel at \$18 average. The data has spoken. Loudly.

### Act 4 — Falling Action

High-LTV customers acquired through Google Search and Email Marketing generate 3x the lifetime value of customers acquired through paid social. Repeat purchase rate sits at 40.4% — a strong foundation to build on with the right retention strategy.

### Act 5 — Resolution

Not a story of failure — a story of opportunity. The right products, customers and channels are already in place. It just needed someone to read the data carefully enough to find the story inside it. Consider it found.

## The Analytical Process

### ASK — Defining the Right Questions

Three core questions framed the analysis: Where is revenue growing and where is profitability being eroded? Which marketing channels are delivering genuine ROI? Who are our most valuable customers and how were they acquired? Clear questions ensured every decision served a specific analytical purpose.

### PREPARE — Building the Data Foundation

Six datasets were identified: order transactions, ad spend by channel, customer profiles, product catalogue, marketing channels and a date dimension table. Data was assessed for completeness, consistency and relevance before any analysis began — a step that is easy to skip and expensive to regret.

### PROCESS — Cleaning and Shaping the Data

All six datasets were processed through Power Query. Key steps included data type corrections, date field standardisation, null value handling, removal of cancelled orders and column renaming. A star schema was built with six active relationships and one inactive relationship activated via DAX USERELATIONSHIP for acquisition channel analysis.

### ANALYZE — Extracting Insight from Data

46 DAX measures were developed across five domains: Revenue & Sales, Profitability, Marketing & ROAS, Customer Analytics and Time Intelligence. Three key insights emerged: Supplements delivers the highest gross profit margin at 68.2% but receives disproportionately low ad budget. TikTok ROAS improved 31% while Meta declined 22%. High-LTV customers were predominantly acquired through the two most cost-efficient channels.

### SHARE — Communicating the Story

A six-page interactive dashboard was built following the Guided Analytics Framework. Each page follows Schneiderman's Mantra: overview first, zoom and filter, then details on demand. Design was guided by Hick's Law, pre-attentive attributes and the Aesthetic-Usability Effect.

### ACT — Driving Decisions from Data

Three recommendations: (1) Reallocate 15-20% of Meta budget toward TikTok and Email Marketing. (2) Increase Supplements spend for Beauty Greens Powder and Omega-3 Fish Oil. (3) Target 50%+ repeat purchase rate through email sequences and subscription expansion. Data without action is noise. These are the signal.
